

Project Blueprint for CloseAI

[See the additional instructions on Quercus before filling in each part of the blueprint.]

Team Name:

CloseAI

Domain:

Trip Planner

- Store events in a calendar
- Allow users to share calendars
- Store location data using maps API
- Give warnings using coordinates and weather API
- Suggest nearby activities ([link](#)) - backup is LLM

Software Specification:

Travel event planning app. Allows users to create, manage, and share events with location and time data, displayed in a GUI featuring a calendar (and map?). Suggests local activities

- Location + time frame (hours + day) --> API call to search/browse for relevant activities -
-> auto schedule algo OR manually place
- Share a photo of the calendar

Other tab suggestions / search and can add to calendar

Autoschedule (algorithm off of location, weather, timing if it is open or not)

Things to consider when making it

- For the autoschedule for location, need to consider whether they have a car or are walking, etc

Extra (if time)

- Add other people to events, send notification to their email (or just connect their Google calendar and modify it / invite them and it shows up in their google calendar? - should be doable with just their email)
- Longer time so the trip is not just a day

Features:

- Autoschedule
- Select (non autoschedule)
- Bookmark
- Search

- Scrolling feature AND day plan right side
- Google maps dashboard
-

User Stories:

Assigned Member	User Story	Notes
Team	Omar enters his trip's location and start/end time, gets a trip schedule, and shares it with his friends.	Team story; central functionality
Shiyuan	Daniel circumvents optimizing for travel distance, weather, and activity quality himself by using the autoschedule feature.	Autoschedule algorithm (ratings, transportation time, weather)
Bianca	Edit trip manually Richard is not happy with his autoscheduled trip and edits it himself before sharing his perfect schedule with all of his friends.	Sharing trip/schedule, editing current trip/schedule (search activity feature)
Emily	Autoschedule Josh hops off the plane and needs a schedule for his trip ASAP so he autoschedules a trip and follows it immediately.	Autoschedule implementation
Alex	Search Charisman is entranced by all of the local activity options provided and scrolls for hours on the activity search feature.	Collect and display local activities
	Filter + bookmark X person wants to browse all the activities and then narrow down what they have time for, implemented bookmark feature+ filter for "bookmarked" and "what is in today's calendar" so that can choose both filters to see the	

	bank of activities they have then narrow down	
Raashid	Map + calendar Edwin edits his schedule for hours, entranced by the beautiful UI.	Website dashboard (calendar)

Proposed Entities for the Domain:

Entity	Role	Instance Variables/Key Methods
User	Concrete class	Username, email, event, createEvent(),
Event	Concrete class	Name, destination, startTime, endTime,
Trip/Schedule	Concrete class	destination, startTime, endTime, eventsList
Dashboard	Concrete class	trip, user, destination, startTime, endTime
WeatherWarning	Concrete class	location, time, weatherCondition, severity; generateWarning()
Location	Value object	latitude, longitude, address; calculateDistance()

Proposed APIs for the Project:

Google Maps Places API – returns nearby matching places

Weather API – OpenWeather provides weather information based on a location

ChatGPT API - Generate backup activity suggestions or descriptions when external activity search is limited.

Scheduled Meeting Times and Mode of Communication:

- Weekly tutorial timeslot.
- Meeting Time Outside Lab: before lecture or tutorial (5 – 6 pm).
- Mode of Communication: Discord for team communication and GitHub for tracking tasks.

Team Agreement:

By writing our names below, we confirm that we have agreed to work on this project.

Name: Raashid Azeem Ahamed

Name: Alex Zhang

Name: Emily Yan

Name: Bianca Bian

Name: Shiyuan Lyu

****Fulfilling all specifications listed in this blueprint does guarantee a 100% project mark.****
